

User's Guide

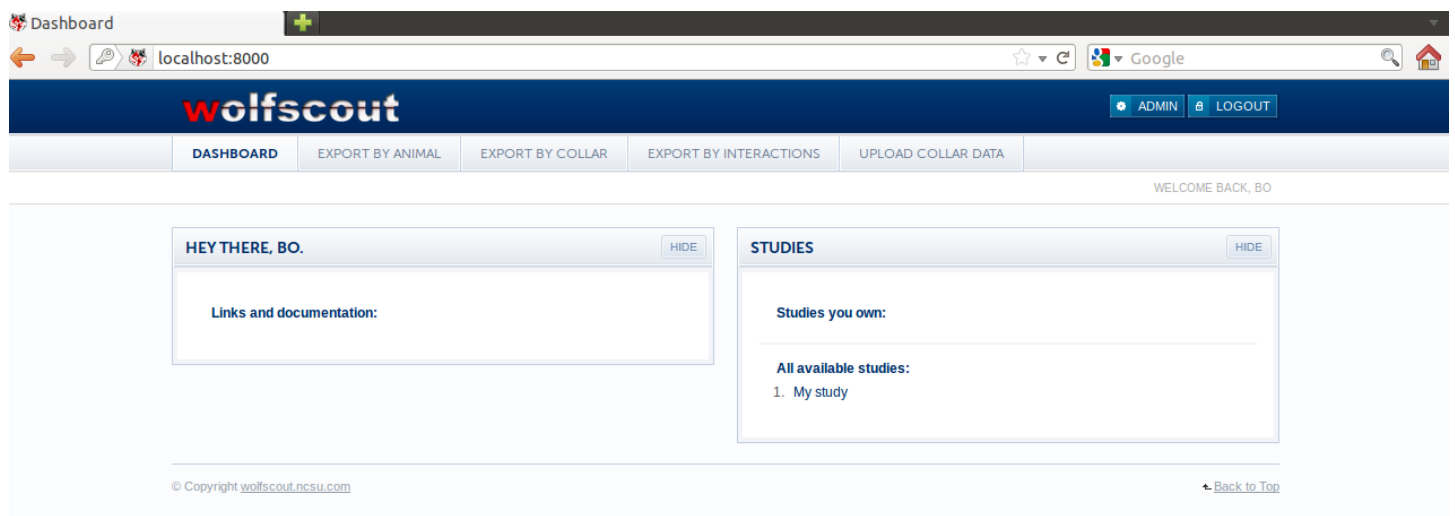

Introduction:

The following will provide guidance on all the pages and functions of wolfscout.

The user can connect to the server by visiting <http://<serverIP>> where <serverIP> is the server's IP address, currently 152.14.104.35. This will open up the login page if the user is not already logged in.

If the user does not have a username and password in the system, an administrator will have to add the user. After logging in, the user will be presented their dashboard. Here, they can see a Studies box (on the right in the picture) which will display links to studies the user owns or are available to her.

Clicking on a study will take you to that study's page.

The user can return back to their dashboard by clicking on Dashboard at the top left of the page, or the Wolfscout logo.

Exporting:

The user has several options for exporting their data, all available by clicking on the appropriate link. There is Export by Animal, Export by Collar, and Export by Interactions.

EXPORT ANIMAL DATA CSV

Export by Animal has the option to export animal demographics, collar, and weather data. The page will display two boxes. The first, Animal Filter, lets the user choose which animals she wants to export data for. If any are chosen, then the exported file will contain only data for those animals.

The second box, Filter Fields, lets the user choose which fields the data should contain. Each field can be selected/deselected individually, or all together using the Collar Fields field.

When ready, the user can click Export Animal Data CSV to export the data.

Export by Collar is similar except it will not include animal demographic data. It will only contain collar and weather data. The Collar Data box on the left allows the user to choose specific collars and the exported data will contain only data for those collars. The Filter Options lets the user choose which fields the exported data will contain.

ANIMAL INTERACTION GROUPS FOR 'TADA'

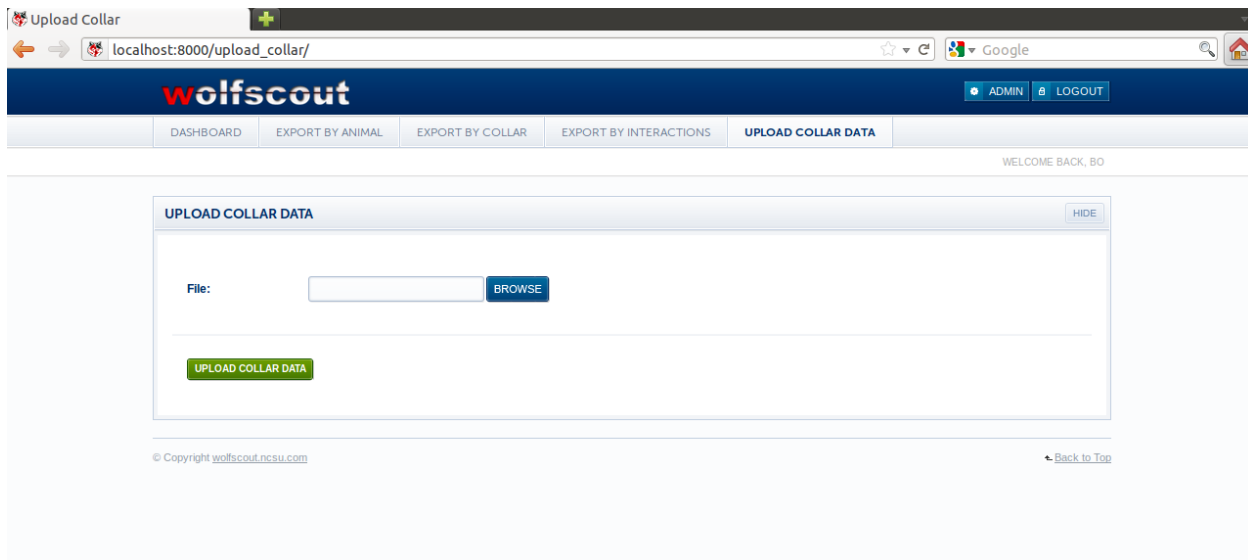

Click on an Animal Interaction Group to view its interactions or click export...

Interaction Group	Distance for this Group	Export Interaction Group
tadas	None km	

From here, the user can click on the export icon to export the interaction data or click on the interaction group to see the data.

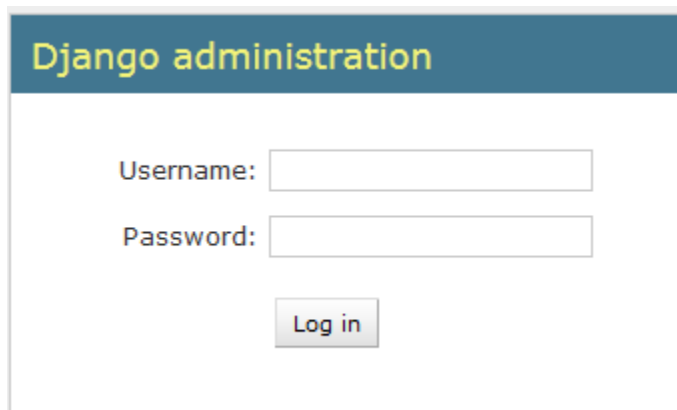

Upload:

Users can upload collar data by clicking on the Upload Collar Data link. Here, the user can choose a file and click the Upload Collar Data button. The file must be in an appropriate format.

Administration:

Users with admin permissions can access the administration console to perform various tasks such as adding and removing users, changing passwords, etc. To access the admin console, visit <http://<serverIP>/admin> where <serverIP> is the server's IP address, currently 152.14.104.35.

After logging in, the user can choose from several “models” that are contained within the database. Most of these should not be modified since they allow unrestricted access to data in the database. Any data in the database can be added or removed from here.

This admin console will mostly be used to create, edit, or delete users and groups under the Auth heading.
